SVANTEK specialises in the design and manufacture of professional instrumentation for the measurement and analysis of sound & vibration. Established in Warsaw, Poland in 1990, SVANTEK now supplies products across 40 countries, worldwide.

With 25 years of industry experience, the company has established itself as one of the leading innovators in sound & vibration products, with a global reputation for producing some of the most accurate and reliable instruments on the market.

SVANTEK’s accredited laboratory employs state-of-the-art calibration technology and instrumentation, which when combined with the highest level of design and manufacturing knowledge, can provide its customers with the latest in ISO/IEC 17025 calibration certified products.

The SVAN979 is our flagship sound & vibration analyser. Your first impression will be formed by the amazing OLED display which offers excellent visibility in all light conditions. The instrument’s lightweight and durable aluminium housing not only allows for a firm grip but also protects the valuable electronic device from damage and all forms of electromagnetic interference.

The SVAN979 can take measurements over a very wide dynamic range - over 110dB. Its high-quality GRAS 40AE microphone can measure frequency ranges as low as 3 Hz. Other microphones can be used with the device, should you want to measure very low frequencies or very high levels of noise. The microphone preamplifier has also been reinforced with a collar to protect it against mechanical damage. One amazing feature of the SVAN979 is that if you disconnect the microphone preamplifier, you can use the instrument to take vibration measurements - simply by connecting up a cable and a vibration sensor.

The SVAN979 has an extensive range of hardware and firmware add-ons that includes built-in Bluetooth, a windscreen infrared detector, direct connections to GPS module, 3G or WiFi modem and the a unique built-in vibration shock sensor that warns the user whenever the instrument itself is exposed to vibrations that may disrupt measurements.

Two USB ports allow for the instrument to simultaneously connect to a GPS module and communicate with a computer. The USB port also allows for audio streaming where the data being transferred to a computer and written in the form of a WAV file suitable for further analysis.

Usage of so many advanced features at the same time is possible because the instrument has two high-speed digital signal processors. As a result, the SVAN979 is capable of taking measurements at 2 ms intervals, which are logged simultaneously to an audio recording (with 48kHz sampling rate, 24 bits) while also performing frequency analysis in real time. Only the SVAN 979 can meet such a challenge.

Setting up such advanced measurements can sometimes be very complicated but not with the SVAN 979. The instrument’s intuitive menu structure of this instrument has been designed to make the measurement experience a pleasure.

### Features

- Class 1 IEC 61672-1:2002 sound level measurements (PTB type approval 21.21/13.06)
- General vibration measurements (acceleration, velocity and displacement)
- Three parallel independent profiles
- 1/1, 1/3 octave real-time analysis
- 1/6, 1/12 octave real-time analysis (optional)
- FFT analysis 1600 lines in selectable frequency band
- Time-domain signal recording
- Advanced data logger including spectra logging and audio-events recording
- Reverberation time measurements
- Pure tone detection (optional)
- Advanced trigger and alarm functions
- User programmable band-pass filters (optional)
- Windscreen and extension cable auto detection
- Built-in vibration shock sensor
- MicroSD card
- Options for 3G, LAN & WLAN remote communication or GPS time synchronisation
- Bluetooth & SvanMobile app for measurement tracking
- Super contrast (10000:1) colour OLED display
- Built-in signal generator
- All-weather microphone protection SA 279 (optional)
- Hand held, light weight and robust case
## Sound Level Meter & Analyser

**Standards**
Class 1: IEC 61672-1:2002 (PTB approval 21.21/13.06)

**Meter Mode**
- Elapsed time, Lxy (SPL), Lxeq (LEQ), Lxpeak (PEAK), Lxmin (MIN), Lxmax (MAX), Ovl (OVERLOAD %), Lxye (SEL), LN (LEQ STATISTICS), Lden, LEPd, Ltm3, Ltm5
- Simultaneous measurement in three profiles with independent set of filters (x) and detectors (y)

**Analysers**
- 1/1 or 1/3 octave real-time analysis
- 1/6 or 1/12 octave real-time analysis (optional)
- FFT: 1600 lines, up to 20.0 kHz band
- Reverberation time analysis in 1/1 or 1/3 octave bands (RT 60)
- Loudness based on ISO 532B standard and Zwicker model (optional)
- Pure tone detection meeting ISO 1996-2 (Tonality option)
- User programmable second order band pass filters (optional)

**Weighting Filters**
- A, C, Z, B, G

**RMS Detector**
- Digital True RMS detector with Peak detection, resolution 0.1 dB
- Time constants: Slow, Fast, Impulse

**Microphone**
- GRAS 40AE, 50 mV/Pa, prepolared 1/2" condenser microphone

**Preamplifier**
- SV 17 Voltage type (support 200V polarisation)

**Linear Operating Range**
- 22 dBA RMS ÷ 140 dBA Peak (in accordance to IEC 61672)

**Dynamic Measurement Range**
- 12 dBA RMS ÷ 140 dBA Peak (typical from noise floor to the maximum level)

**Internal Noise Level**
- less than 12 dBA RMS

**Frequency Range**
- 3.15 Hz ÷ 20 kHz, with GRAS 40AE microphone

## Vibration Level Meter & Analyser

**Standards**
- ISO 10816-1

**Meter Mode**
- RMS, MAX, Peak, Peak-Peak
- Simultaneous measurement in three profiles with independent set of filters and detectors

**Analysers**
- 1/1 or 1/3 octave real-time analysis meeting Class 1 IEC 61260
- 1/6 or 1/12 octave real-time analysis meeting Class 1 IEC 61260 (optional)
- FFT: 1600 lines, up to 20.0 kHz band
- RPM rotation speed measurement parallel to the vibration measurement (optional)
- User programmable second order band pass filters (optional)

**Filters**
- HP1, HP3, HP10, Vel1, Vel3, Vel10, VelMF, Dil1, Dil3, Dil10, Wh

**RMS Detector**
- Digital True RMS detector with Peak detection, resolution 0.1 dB
- Time constants: from 100 ms to 10 s

**Accelerometer (optional)**
- Any IEPE accelerometer

**Measurement Range**
- Transducer dependent

**Frequency Range**
- 0.5 Hz ÷ 22.4 kHz (transducer dependent)

## General Information

**Input**
- LEMO 7-pin: Direct AC, Direct AC with 200 V polarisation, Direct DC or IEPE type with TEDS

**Self-vibration Monitoring**
- Built-in

**Dynamic Range**
- 115 dB

**Frequency Range**
- 0.5 Hz ÷ 22.4 kHz, sampling rate 48 kHz

**Data Logger**
- Time-history logging with logging step down to 2 millisecond,
- Time-domain signal recording and audio events recording function

**Signal Generator**
- Sine, White noise, Pink noise

**Display**
- Super contrast (10000:1) OLED 2.4" colour display (320 x 240 pixels)

**Memory**
- 32 MB non-volatile flash type, micro SD card 8 GB (included)

**Interfaces**
- USB 1.1 Client, USB 1.1 Host, Bluetooth, RS 232 (with optional SV 55), IrDA (optional)
- GPS time synchronisation and positioning (optional)
- Extended I/O - AC output (1 V Peak) or Digital Input/Output (Trigger – Pulse)

**Power Supply**
- Four rechargeable AA batteries
- SA 17A external battery pack (option)
- External power supply 6V/500 mA DC ÷ 15 V/250 mA DC
- USB interface 500 mA HUB

**Environmental Conditions**
- Temperature from -10 °C to 50 °C
- Humidity up to 90 % RH, non-condensed

**Dimensions**
- 305 x 79 x 39 mm (with microphone and preamplifier)

**Weight**
- Approx. 0.6 kg with batteries

The policy of our company is to continually innovate and develop our products. Therefore, we reserve the right to change the specifications without prior notice.

Technical Specifications
The SVAN 977 belongs to the next generation of Class 1 sound & vibration instruments and is designed to meet the requirements of both environmental monitoring and occupational health and safety applications. Its exceptional hardware design enables the measurement of ultrasound frequencies in the 40 kHz band.

The SVAN 977 provides broad-band results such as Leq, Max, Min and Peak with all standard weighting filters together with an incredible time-history logging feature with two adjustable logging steps. The broad-band results can be recorded in three acoustic or vibration profiles which enables measurements to be taken with 3 different filters (e.g. A, C, Z) as well as 3 different detector time constants (e.g. Fast, Slow, Impulse). Audio recordings for noise source recognition and data post-processing can be performed simultaneously with time-history logging. Additionally, the powerful DSP (digital signal processor) in the SVAN 977 instrument can perform real-time 1/1 or 1/3 octave analysis including statistical calculations. Other functions like FFT and RT 60 analysis are also available as options.

With the latest software the SVAN 977 can send an alarm via SMS text message or email whenever user-defined threshold levels are exceeded. The system is flexible enough to alert different people depending on the day of the week or the time of day.

The data is stored on a microSD card and can be easily downloaded to a PC using SvanPC++ or Supervisor software over USB connection.

Features

- Class 1 IEC 61672-1:2002 sound level measurements
- Three parallel independent profiles
- Ultrasound measurements in 40 kHz band
  - with optional microphone
- 1/1 octave real-time analysis
- 1/3 octave real-time analysis (optional)
- Reverberation time measurements (optional)
- FFT analysis (optional)
- Time-domain signal recording & audio events recording (optional)
- Remote communication (optional)
- Bluetooth™ interface (version dependent)
- Advanced noise monitoring alarms (optional)

¹works together with the meter mode  
²dependent on instrument operation mode

The policy of our company is to continually innovate and develop our products. Therefore, we reserve the right to change the specifications without prior notice.
The SVAN 958A is a 4-channel sound & vibration analyser designed to provide simultaneous sound and vibration measurements. Each of the four input channels can be independently configured for sound or vibration detection with different filters and RMS detector time constants giving users an enormous amount of flexibility with their measurements.

The real advantage of SVAN 958A is its capability of performing advanced analyses simultaneously. In practice this allows the user to make broad-band measurements such as Leq, RMS, Max, Min, Peak together with 4-channel analysis such as FFT or 1/3 octave bands. One exceptional feature is that the device can make 4-channel time-domain signal recordings in WAV format.

All measurements can be stored in the non-volatile 32 MB internal memory or on a USB pen-drive and can be easily downloaded to a PC with SvanPC++ software.

The SVAN 958A with RS 232 interface (SV55) is offered with 3G modem or LAN & WLAN connections. Together with SvanPC++_RC remote communication software, these interfaces provide easy remote access to the instrument settings & data over the Internet or local area network.

The instrument is powered by four AA standard or rechargeable batteries or by the external DC power source or USB port. The robust case and lightweight design finish the exceptional features of this new generation instrument.

**Features**

- 4-channel, 20 kHz real-time, simultaneous sound and vibration analyser
- Sound measurements Class 1, IEC 61672:2002
- Human vibration measurements
- Ground / building vibration mode
- Advanced trigger and alarm functions
- Advanced data logger
- Time domain signal recording to USB disk (optional)
- 1/1 and 1/3 octave real-time analysis (optional)
- FFT analysis up to 1600 lines in selectable band (optional)
- FFT cross spectra (optional)
- Acoustic dose meter function (optional)
- Reverberation time measurements (optional)
- Sound intensity measurements (optional)

The policy of our company is to continually innovate and develop our products. Therefore, we reserve the right to change the specifications without prior notice.
The SV 38 is a MEMS based triaxial accelerometer designed for whole-body seat vibration measurements with the SVAN 958A four-channel analyser. The seat-pad meets ISO 8041:2005 and ISO 2631-1 requirements so it can be used for seat and seat-back vibration measurements. For the periodic verification, the accelerometer can be easily removed from the seat pad and installed on a shaker with a dedicated SA 38 adapter (optional). The ISO 8041 in-situ check before and after measurement can be performed with an SV 111 vibration calibrator without the necessity of removing accelerometer from the seat-pad.

### Technical Specifications

**Performance:**
- Number of Axes: 3
- Sensitivity (± 5 %): 100 mV/(ms⁻²) at 15.915 Hz
- Measurement Range: 0.01 ms⁻² RMS ÷ 50 ms⁻² PEAK
- Frequency Response (by design guideline, ± 3 dB): 0.1 Hz ÷ 100 Hz
- Resonant Frequency: 5 kHz (MEMS transducer)
- Electrical Noise: < 316 µV RMS, HP1 weighting

**Electrical:**
- Supply Current (IEPE): 1 mA ÷ 10 mA (2.5 mA typ.) per channel
- Supply Voltage (IEPE): 22 V ÷ 30 V (28 V typ.)
- Bias Voltage (IEPE): 15.3 V ± 0.5 V
- Output Impedance: 51 Ohms
- Charge / Discharge Time Constant (start-up time): 30 sec. typ.
- TEDS Memory: Installed (Channel 1)

**Environmental Conditions:**
- Maximum Vibration: 100 000 ms⁻² shock survival for MEMS sensor
- Temperature Coefficient: < +0.012 dB/°C
- Temperature: from -10 °C to +50 °C
- Humidity: up to 90 % RH, non-condensed

**Physical:**
- Sensing Element: MEMS
- Cable: integrated 1.4 meters long
- Connector: LEMO 4-pin plug (SVAN 958A compatible)
- Dimensions: 236 mm diameter; thickness from 3.6 mm to 12 mm
- Weight: 550 grams (including cable and rubber cushion)

**Accessories:**
- SA 38 (optional) Calibration adapter
- SC 39S (optional) Cable LEMO 4-pin socket to three BNC plugs, 0.7 meter

The policy of our company is to continually innovate and develop our products. Therefore, we reserve the right to change the specifications without prior notice.
The **SV 84** is a low-noise, hermetically sealed triaxial piezoelectric accelerometer designed to monitor building and ground vibrations with **SVAN958A** analyser.

A hermetically sealed glass connector protects the **SV 84** from harmful dust and moisture enabling the outdoor use without additional enclosures. The signal ground is insulated from the mounting surface and outer case to prevent ground loops.

The policy of our company is to continually innovate and develop our products. Therefore, we reserve the right to change the specifications without prior notice.
The SVAN 974 is a vibration level meter and analyser designed to measure vibrations from machinery. The instrument uses the SV80 accelerometer, which is an ideal choice for walk-around vibration measurements in challenging industrial environments with heavy machinery, such as pumps, motors or fans. The flexible accelerometer input also supports different types of vibration sensors including: IEPE, charge and direct. The SVAN974 can simultaneously present the parallel vibration acceleration, velocity and displacement results along with frequency analysis and wave recordings. The FFT analysis allows selection of the frequency band providing accurate analysis of the vibration source of interest (e.g. 1600 lines in frequency band up to 1.25 kHz). With a dedicated tachometer the SVAN 974 can monitor RPM together with vibration assessment (simple order tracking).

The powerful digital signal processor allows for incredibly fast time history logging to a microSD card. The measurements data can be easily downloaded to a PC using the SvanPC++ software package over a USB connection.

Features

- Vibration analyser that supports IEPE and Charge type accelerometers
- FFT analysis
- Built-in machine filter (10 Hz + 1 kHz) complying to ISO 10816
- Three independent profiles - parallel acceleration, velocity and displacement measurements
- 1/1 or 1/3 octave real-time analysis (optional)
- Time-domain signal recording to WAV format (optional)
- Advanced data logger including spectral analysis
- MicroSD card
- RPM measurement (optional)
- Advanced trigger function
- OLED colour display with super brightness and contrast
- Handheld, light weight and robust case
- Easy to use

**SV 80 General Purpose Vibration Accelerometer**

The SV 80 is an industry standard IEPE accelerometer offered to SVAN 974. It is an ideal choice for walk-around vibrations measurement in the rugged environments of industrial machinery monitoring, such as pumps, motors or fans. The accelerometer is mounted on a vibrating surfaces with the mounting magnet. The design of SV/80 features the low electronic noise and wide temperature operating range.

### Technical Specifications

#### Performance:
- **Number of Axes**: 1
- **Sensitivity (± 5 %)**: 10 mV/(ms⁻²) – 100 mV/g
- **Measurement Range**: 0.01 ms⁻²RMS ÷ 500 ms⁻² Peak
- **Frequency Response (by design guideline, ± 3 dB)**: 0.5 Hz ÷ 14 000 Hz
- **Resonant Frequency**: 25 kHz
- **Residual Noise (1 Hz, 24°C)**: 30 µg RMS
- **Residual Noise (1 Hz to 25 kHz, 24°C)**: 300 µg RMS

#### Electrical:
- **Supply Current (IEPE)**: 2 mA ÷ 10 mA
- **Supply Voltage (IEPE)**: 22 V ÷ 28 V
- **Bias Voltage (IEPE)**: +12 VDC
- **Output Impedance (Nominal)**: 50 Ω
- **Charge / Discharge Time Constant (start-up time)**: < 1 sec. typ.

#### Environmental Conditions:
- **Maximum Vibration (shock survival)**: 50 000 ms⁻² Peak
- **Thermal Sensitivity Coefficient**: 0.07 %/°C F.S.
- **Operating Temperature Range (recommended)**: from -10 °C to +50 °C
- **Humidity / Enclosure**: IP67, epoxy sealed

#### Physical:
- **Connector**: TNC socket, top radially mounted
- **Weight**: 40 grams
- **Mounting Thread**: 10-32 UNF 2B

#### Accessories:
- **Mounting Stud**: 10-32 to M5 (included)
- **SA 27/10-32**: Mounting magnet base (optional)
- **SC 27**: Coil cable TNC plug – TNC plug, 2 meters (optional)

The SV81 is an IEPE piezoelectric accelerometer offered to SVAN974. The accelerometer's high sensitivity and low electronic noise enable measurements of very low vibration amplitudes over the typical machines’ frequency operating ranges. The accelerometer is mounted on a vibrating surfaces with the mounting magnet.

SV 200 is a fully integrated solution for permanent noise monitoring applications. It measures and stores data suitable for automated reports, advanced post-processing analysis and records audio events for noise source recognition. The SV 200 with 3G modem can send an alarm via SMS text message or e-mail whenever user-defined threshold levels are exceeded. The advanced alarms function allows to combine triggers based on time, noise threshold, meteo conditions or spectrum. The system is flexible enough to alert different people depending on the day of the week or the time of day. The built-in web server gives access to measurement data, settings and real-time results stored in the SV 200 monitoring station via any Internet enabled device. The SV 200 is using the electrostatic actuator to perform the remote system checks. The advantage of using electrostatic actuator method is check of the complete measurement path including the microphone’s membrane. The system check is performed during the measurements and detected errors are signalized to the user by SMS text message and e-mails. The SV 200 is small, lightweight and can easily be installed by a single person.

Features

- ‘All in one’ design for portable, mobile and permanent noise monitoring installations
- Rugged housing protects the system against harsh outdoor conditions (IP65)
- Integrated electrostatic actuator for full system verification
- IEC 61672 Class 1
- Auto-calibration
- Internal 3G or Wi-Fi modem
- Large windscreen for high wind speeds
- Low power consumption & Li-Ion battery powered operation providing true flexibility for both short and long term measurements
- Web server for system configuration
- 16 GB data storage
- Advanced alarms based on time, noise threshold, meteo conditions or spectrum
- Weather monitoring module SV 205B or Vaisala WXT 520 (optional)
Sound Level Meter & Analyser

Standards

Weighting Filters
A, C, Z

Time Constants
Slow, Fast, Impulse

RMS Detector
Digital True RMS detector with Peak detection, resolution 0.1 dB

Microphone
Microtech Gefell MK 255, 50 mV/Pa, prepolarised 1/2" condenser microphone

Preamplifier
Integrated

Linear Operating Range
25 dBA RMS ÷ 133 dBA Peak (in accordance to IEC 61672)

Dynamic Measurement Range
15 dBA RMS ÷ 133 dBA Peak (typical from noise floor to the maximum level)

Internal Noise Level
less than 15 dBA RMS

Dynamic Range
115 dB

Frequency Range
3.5 Hz ÷ 20 kHz

Meter Mode Results
Elapsed time, Lxy (SPL), Lxeq (LEQ), Lxpeak (PEAK), Lxymax (MAX), Lxymin (MIN), Lxye (SEL), LN (LEQ STATISTICS), Lden, LEPd, Ltm3, Ltm5

Statistics
Simultaneous measurement in three profiles with independent set of filters (x) and detectors (y)

1/1 Octave Analysis
Real-time analysis meeting class 1 requirements of IEC 61260 (4 Hz ÷ 16 kHz)

1/3 Octave Analysis
Real-time analysis meeting class 1 requirements of IEC 61260 (3.15 Hz ÷ 20 kHz)

Data Logger
Logging of summary results, spectra and weather data with logging step down to 1 second and time history of selected parameters with short logging step down to 2 millisecond

Audio Events Recording
Time domain records to wav file format on demand with selectable bandwidth and recording period

General Information

Ingress Protection Rating
IP 65

Inputs
Power supply LEMO 3-pin, extended I/O port LEMO 9-pin

Remote System Check
Built-in electrostatic actuator, triggered either manually or automatically

Memory
Micro SD card 16 GB (non-removable)

Display & Keyboard
External controller with 2.4" OLED colour display and keyboard (optional)

Communication Interfaces
USB

3G modem (included in SV 200_3G)
Wi-Fi / LAN module (included in SV 200_WiFi)

Power Supply
Li-ion rechargeable battery (non-removable)

Operation time on battery (14.4 V / 3.1 Ah)
SV 200 (modem off) 45 hours
SV 200_3G 29 hours
SV 200_WiFi (LAN mode) 20 hours
SV 200_WiFi (WiFi mode) 17 hours

Solar Panel (not included)
MPPT voltage 17.0 V ÷ 20.0 V

AC power supply (included)
Input 100 ÷ 240 VAC, output +24 VDC 2.5 A, IP 66 housing

External DC source (not included)
Voltage range 10.5 V ÷ 24 V, e.g. 12 V or 24 V accumulator

Environmental Conditions
Temperature
from -30 °C to 50 °C
Humidity
up to 99 % RH

Physical Characteristics
Dimensions
700 mm length; 70 mm diameter excluding windscreen (windscreen diameter 130 mm)

Weight
Approx. 2.8 kg

1 meter mode, time history logging step 1 second, 3G modem transmission 10 % of the measurement time
2 only with external powering
3 function operates together with sound level meter mode
4 15 V required for internal battery recharging

The policy of our company is to continually innovate and develop our products. Therefore, we reserve the right to change the specifications without prior notice.

**SV 211 Noise Monitoring Station**

The SV 211 is a portable monitoring system housed in a waterproof case dedicated for periodic outdoor measurements. The system can be used with either the SVAN 977 or SVAN 979 which can easily be removed from the case and used as handheld sound level meters. The SV 211 is powered by a high capacity rechargeable battery which is mounted in the case and can be charged from an external DC power source such as a mains-powered charger or a solar panel. The outdoor microphone kit can easily be installed on a mast with standard mounting threads. For measurement at 4 meters height a special mast with a set of guy-ropes is also available.

An optional extra for the SV 211 system is our SV 205A weather monitoring module which measures temperature, air pressure, humidity, wind speed and direction and also detects a rainfall.

The SV 211 supports direct communication via 3G and WiFi which enables full remote control over the measurements.

---

**Features**

- Waterproof protective case for SVAN 977 or SVAN 979
- Options for remote communication (3G, LAN & WLAN)
- Meteorological module for temperature, pressure, humidity, rain detection, wind speed and wind direction (optional)
- Optional microphone outdoor protective kit
- Powered by an internal battery, DC power supply or solar panel (optional)
- Internal controller (optional)

The policy of our company is to continually innovate and develop our products. Therefore, we reserve the right to change the specifications without prior notice.
Weather conditions have a significant influence on noise measurements. Therefore, Svantek monitoring stations are equipped with interfaces for meteo sensors. With the optional SV 205A (dedicated for SV 211 and SV 212) or SV 205B (dedicated for SV 200) weather station, the noise monitoring station can measure wind speed, wind direction, temperature, humidity, atmospheric pressure and detect rain. Weather data is stored in parallel to the noise measurements.

Features

- Portable, designed for permanent monitoring installations
- Robust construction
- Wind speed & direction simultaneously
- Integrated with Svantek monitoring systems
- Weather data written to Svantek data files
- No separate powering required

Technical specifications

- Temperature Range: -40 °C ÷ 124 °C (±0.3 °C)
- Ambient Pressure Range: 150 hPa ÷ 1150 hPa (±5 hPa)
- Humidity: 0 % ÷ 100 % (±2 %)
- Wind Speed: 0 m/s ÷ 60 m/s (±2 %)
- Wind Directions: 0° ÷ 359° (±3°)
- Rain Detector: on/off

The policy of our company is to continually innovate and develop our products. Therefore, we reserve the right to change the specifications without prior notice.
Noise & Vibration Monitoring Kit

The SV 212 is an easy to install and cost effective system for noise and vibration monitoring. The portable and battery powered system can be used for a variety of monitoring applications including construction site monitoring, tunneling and blasting. This portable system works great in noise & vibration monitoring applications related to construction sites and road traffic. The SV 212 is protected from weather conditions by a waterproof case with locking capabilities. This solution makes the system portable allowing it to be moved from one place to another easily. An internal battery is able to power the whole system up to 10 days without recharging. Alternatively the SV 212 can be powered from an external DC power source or solar panels.

Ground Vibration Mode in SVAN 958A

The ground vibration mode in the SVAN 958A has been developed for both short- and long-term monitoring applications. It measures triaxial velocity and acceleration in parallel and calculates Peak Particle Velocity and Vibration Dose value simultaneously. In addition to logging overall values and frequency spectra, the time domain signal is stored for post processing purposes. An additional measurement channel is available for Class 1 noise measurements in parallel to triaxial vibration measurements. Measurements are performed according to BS and DIN standards. FFT is used for dominant frequency determination and comparison with the BS and DIN norm curves and the Peak Velocity spectrum is recorded.

Options for Remote Communication

Remote control of the SV212 is available either over 3G or Local Internet connection (LAN, WLAN). Data transmission is fully supported by SvanPC++ _RC Remote Communication software. Remote communication allows the user to set up the instrument and download data from monitoring systems placed in the field. Remote alarms that send messages via e-mails and text messages (SMS) are also implemented (3G version only).

Key Features

- Tri-axial vibration & noise measurement
- Root Mean Square (RMS) acceleration time history logger
- Peak Particle Velocity (PPV) assessment
- Vibration Dose Value (VDV) time history logger
- Two profiles per channel for simultaneous acceleration and velocity assessment
- Weighting filters comply to ISO 2631, BS 6472 and BS 7385
- KB filter according DIN 4150 and DIN 45669
- Simultaneous FFT analysis and WAV recording according to DIN 4150-3 standard (option)
- Options for remote communication (3G, LAN & WLAN)
- Advanced alarm triggers combined with SMS and e-mail notification (option)

Remote communication is one of the most important features of unattended monitoring systems. On the PC side communication is handled by the powerful SvanPC++_RC software package that offers advanced features such as automatic data download, CSV and HTML data publishing as well as FTP upload.

The SvanPC++_RC module supports configuration of the noise & vibration monitoring stations as well as configuration of advanced alarms in the SV 200 and SVAN 977 to combine triggers based on time with noise thresholds.

Thanks to SvanNET relay server, the SvanPC++_RC module can connect with multiple monitoring stations with 3G modems regardless if they have public or private IP. Connection over SvanNET allows users to download files and reconfigure the noise monitoring station using SvanPC++_RC module.

### Features

- On-demand and automatic remote data download
- Measurement status monitoring
- Remote system configuration
- On-line data publishing
- Alarming
- SvanNET connections
- Advanced alarms configuration
- System checks
- Microsoft Windows™ service run mode

### Technical specifications

- **Supported Connection**
  - GPRS / 3G modem
  - Wi-Fi / LAN (MOXA™)
  - Bluetooth™
  - USB
  - ZigBee

- **Supported Operations**
  - On-demand and automatic remote data download
  - Measurement status monitoring
  - System check, alerting
  - Remote system configuration
  - CSV and HTML data publishing
SvanPC++ Environmental Monitoring is designed for post-processing of data recorded by Svantek instruments. The module offers a powerful calculator and an automated noise event finder for noise source identification. Thanks to its “Projects” functionality, SvanPC++_EM allows to combine and compare data from multiple measurements as well as create and save reports in MS Word™ templates.

**Features**

- Advanced search tools for noise event recognition
- Data recalculation or removal from the time-history
- EM calculator - a powerful tool that allows data recalculation in defined time periods with selectable time steps. Each calculation scenario can be saved and recalled with a single button click
- Reference spectrum importing, time history results comparison
- Reporting tool - report templates (Microsoft Word™ required)
- Projects - for combining data from multiple files, data comparison and saving the views on data

**Technical specifications**

Data Analysis & Recalculations: \( L_{eq}(LEQ), L_{peak}(PEAK), L_{ymax}(MAX), L_{ymin}(MIN), L_{ye}(SEL), L_{tm5}, LVA, EPNL \)

The SVAN 971 is an extremely small Class 1 Sound Level Meter with options for 1/1 & 1/3 octave analysis. The instrument brings unprecedented state of the art technology to an SLM of this size. The instrument’s user interface makes both configuration and measurement easier than ever before. For those who do not need to alter the measurement settings, the SVAN 971 has an extremely simple operational mode with only Start/Stop controls. This means that the SVAN 971 is the ideal choice for many applications including industrial noise measurement for health and safety, short term environmental noise monitoring and general noise measurements for acoustic consultants or technical engineers. The instrument is easily calibrated in the field using an acoustic calibrator as the calibration begins automatically when the microphone is inserted into the calibrator. The instrument also includes a built-in vibration sensor that provides information about vibrations that could influence the measurements. The SVAN 971 measures broad-band results with all the necessary weighting filters as well as 1/1 octave or 1/3 octave band filters. It also offers time-history logging providing broad-band results and spectra with adjustable logging steps. The audio events recording function works together with sound level meter mode. The data are stored on a microSD card and can be easily downloaded to a PC using the Supervisor software.

Key features

- Small, pocket size design
- Class 1 IEC 61672 type approved (PTP)
- 1/1 & 1/3 octave real-time analysis (optional)
- Large measurement range
- Self-vibration detection
- Dosimeter function (optional)
- Audio events recording (optional)
- Voice comments before and after measurement
- Statistical analysis
- Automatic calibration start
- High contrast colour OLED display
- Screen automatically rotates when instrument turned
- IP 65 rating
- Easy and friendly user interface

*function operates together with sound level meter mode

The policy of our company is to continually innovate and develop our products. Therefore, we reserve the right to change the specifications without prior notice.
The SV 104 is a first noise dosimeter on a market with option for 1/1 octave band filters that allows the most accurate selection of hearing protectors and audio events recording, a very useful feature in identification of noise sources.

We have designed the SV 104 to make noise dosimetry measurements easier. Firstly the voice comment feature replaces necessity of identifying the dosimeter with different kind of stickers. Secondly, a single large measurement range of 55 dB to 140 dB enables measurement in all kinds of working environment. But mostly the auto-calibration is what makes the SV 104 an easy in use. Once the SV 104 detects calibration signal it calibrates automatically saving the calibration data together with the measurement file, both before and after measurement.

Typically the noise dosimeter is worn by the worker on a shoulder which makes it vulnerable accidental shocks, knocks or even fall-downs. To avoid microphone damages on the SV 104 we’ve used a shock resistant MEMS microphone. Additionally an inbuilt tri-axial accelerometer detects all shocks and vibrations that influence noise measurement results. All those unwanted events are marked in the results time history so they can be easily excluded from dose calculation.

The distinguishing feature of SV 104 is the color OLED display that can be easily read even in full daylight or in the dark. The user interface is very friendly to use which makes setting up and using the instrument easier than ever. User has a choice from multiple setup files that can be configured through the included “Supervisor” software. All measurement data is stored on the integral 8GB memory which gives a vast amount of storage.

**Features**

- Noise Dosimeter conforming to IEC 61252
  ANSI S1.25-1991
- Class 2 according to IEC 61672
- Measurements according to ISO 9612
- Measurement range 55 dBA RMS ÷ 140 dBA Peak
- 1/1 octave real-time analysis (optional)
- Three parallel measurement profiles
- Audio events recording during measurement (optional)
- Voice comments before and after measurement
- Built-in accelerometer for vibration shock detection
- Large 8 GB memory
- USB 2.0 interface for data download and battery recharging
- OLED colour display with super brightness and contrast
- Easy in use predefined setups
- Operational time > 40 hours
- Extremely compact, light weight and robust case
Technical Specifications

Noise Dosimeter

Standards: IEC 61252 ed1.1 (2002); ANSI S1.25-1991 (R2007); Class 2 IEC 61672-1 ed2.0 (2013)
Weighting Filters: A, C and Z
Time Constants: Slow, Fast, Impulse
Exchange Rates: 2, 3, 4, 5, 6
Measurement results: Elapsed time, Lxy (SPL), Lxeq (LEQ), Lxpeak (PEAK), Lxmax (MAX), Lxmin (MIN), Lc-a DOSE, DOSE_8h, PrDOSE, LAV, Lye (SEL), Lxyle (SEL8), P(x), (PSEL), E, E_8h, LE(P), PTC (PEAK COUNTER), PTP (PEAK THRESHOLD %), ULT (UPPER LIMIT TIME), TWA, PRTWA, LN (LEQ STATISTICS), OVL (OVERLOAD TIME %)
Measurement Profiles: 3
Microphone: SV 27 MEMS microphone, 1/2” housing with built-in TEDS functionality for the automatic calibration
Measurement Range: 55 dBA RMS ÷ 140.1 dBA Peak
Frequency Range: 20 Hz ÷ 10 kHz
Dynamic Range: 95 dB
Data Logging: Summary results for the measurement time
Voice Comments: Audio records on demand, created before or after measurements, added to measurement file
Audio Recording: Audio events recording, trigger and continuous mode, 12 or 24 kHz sampling rate, WAV format
1/1 Octave: Real-time analysis in octave band filters, Class 1, IEC 61260
1: 9 filters with centre frequencies from 31.5 Hz to 8 kHz

General Information

Display: colour OLED 128 x 64 pixels
Ingress protection: IP 65
Memory: 8 GB
Interfaces: USB 2.0 client or Infrared (docking station compatible)
Keyboard: 3 push buttons
Power Supply: Ni-MH rechargeable cells, operation time > 40 hours
USB interface: 500 mA HUB
Environmental Conditions: Temperature: from -10 °C to 50 °C
Humidity: up to 90 % RH, non-condensed
Dimensions: 88 x 49.5 x 19.2 mm
Weight: 121 grams

1function operates together with noise dosimeter mode
2dependent on instrument operation mode

The SV 104IS is the intrinsically safe noise dosimeter presenting features such as 1/1 octave band real-time analysis and audio events recording functions. This personal dosimeter has a robust 1/2” MEMS microphone enabling easy calibration using most commonly available acoustic calibrators. The new microphone has a large dynamic range of the 90 dB which allows to measure noise from 60 dBA to 140 dBA. The long list of microphone advantages includes also the auto-calibration feature and TEDS memory that stores the calibration info in the microphone itself. The auto-calibration means performing the acoustic calibration automatically once the microphone is inserted into the calibrator.

The SV 104IS is a cable-free dosimeter and is typically attached to the user’s shoulder, close to the ear using the mounting clips supplied. All results are clearly displayed on the amazing OLED screen which offers excellent visibility even in full daylight or darkness. The instrument works with Svantek’s health and safety software package, “Supervisor”, that provides various tools for data analysis and reporting. The docking station supports data transfer to the PC through the infrared interface as well as handles the battery charging. Rechargeable batteries of SV 104IS are able to power the instrument up to 50 hours.

Key features

- Intrinsic safety in accordance with ATEX and IECEx
- Noise Dosimeter conforming to IEC 61252 and ANSI S1.25-1991
- Class 2 sound level meter in accordance with IEC 61672
- Measurement range 60 dBA RMS ÷ 140 dBA Peak
- Automatic calibration start (auto-calibration)
- Vibration shocks detection and recording
- Three parallel measurement profiles
- Voice comments recording
- L(C-A) calculation
- 1/1 octave real-time analysis (option)
- Audio events recording (option)
- OLED colour display with super brightness and contrast
- Easy in use predefined setups
- Operational time > 50 hours
- Extremely compact, light weight and robust case

*The policy of our company is to continually innovate and develop our products. Therefore, we reserve the right to change the specifications without prior notice.*
The SV 102+ is a dual-channel noise dosimeter designed to measure noise exposure in accordance with the ISO 9612 as well as record MIRE (microphone in real ear) measurements in accordance with ISO 11904-1. Unlike single channel noise dosimeters, the two channel SV 102+ allows for noise exposure levels to be assessed simultaneously on both sides of the head. This is particularly important when a worker is exposed to noise coming from a dominant directional source where the placing of a microphone on only one side of the head might understate the true levels of noise exposure.

The SV 102+ uniquely features 1/3 octave analysis, which is required for MIRE methodology. MIRE measurement takes sound measurements from the ear and performs a one-third octave band analysis. The SV 102+ can perform such analyses by using a special microphone probe SV 25S placed at the entrance of the ear canal. MIRE can be used to measure noise exposure in situations where normal dosimetry methods are inappropriate such as in a telephone call centre where the sound comes from headphones.

All SVANTEK dosimeters, including the SV 102+, have the ability to perform 1/1 octave analyses and record audio events. The 1/1 octave analysis is the most accurate method of determining the correct level of hearing protection in accordance with ISO 4869-2 while simultaneous audio recording allows the user to capture and eliminate false sounds that affect the noise exposure levels.

**Features**

- Dual-channel acoustic dosimeter conforming to IEC 61252 and ANSI S1.25-1991
- Dual-channel measurement in accordance to ISO 9612
- Dual-channel MIRE measurement to ISO 11904-1
- Dual-channel 1/1 or 1/3 octave real-time analyser (optional)
- Single measurement range 45 dBA RMS ÷ 141 dBA Peak
- MIRE measurement technique with SV 25S
- Three parallel independent profiles per channel
- Audio Events Recording to microSD card (optional)
- Automatic calibration thanks to the TEDS technology
- USB interface
- OLED colour display with super brightness and contrast

The policy of our company is to continually innovate and develop our products. Therefore, we reserve the right to change the specifications without prior notice.
The new SV 100A is a wireless whole-body vibration exposure meter suitable for whole-body measurements in accordance with ISO 2631-1, both on the seat and seat-back. The SV 100A Bluetooth interface enables current results to be previewed on a smartphone or tablet using our Assistant application. The smartphone app also signals an alarm when set vibration limits are exceeded.

Force sensors that installed in SV 100A automatically detect a driver presence enabling real daily exposure calculations for the period of time when there is a contact with the vibrating surface. The device is equipped with both RMS and RMQ detectors which allows the calculation of Daily Vibration Exposure A(8) based on RMS and VDV simultaneously.

All measurement results are stored in a large 8GB internal memory which allows continuous recording over long periods. The 2.0 USB interface allows fast data download and is also used for battery recharging.

The SV 100A is fully configurable with Supervisor software. It can quickly and easily be set up for all the weighting filters required by ISO standards for the estimation of the effects of vibration on health, comfort, perception and motion sickness. The dedicated Whole-Body Vibration Exposure panel within Supervisor software makes reporting extremely easy.

---

Features

- Whole-body Vibration Exposure Meter complying to ISO 8041
- Wireless instrument with rechargeable battery
- Unattended measurement of seat-pad or seat-back vibration
- Bluetooth communication
- Dedicated application for smartphones
- Auto-detection of the operator/driver
- Weighting filters complying to ISO 2631-1
- Calculation of A(8) Daily Exposure
- Results both in m/s² and exposure points
- Large 8 GB memory
- USB 2.0 interface
- OLED colour display and push-buttons
- Operational time > 24 hours
- Easy to use predefined setups
- Extremely compact, lightweight and robust

---

The policy of our company is to continually innovate and develop our products. Therefore, we reserve the right to change the specifications without prior notice.
The SV 103 is the world’s first personal hand-arm vibration exposure meter. The instrument meets ISO 8041:2005 and is the ideal choice for making measurements according to ISO 5349 and European Directive 2002/44/EC. The SV 103 significantly decreases the measurement uncertainty related to the estimation of daily exposure time as the instrument is attached to the user’s arm and is small enough to take daily vibration exposure measurements without interfering with normal working activities. The SV 103 uses the SV 107 moulded hand-held adaptor designed in accordance to ISO standards. The SV 107 has tri-axial MEMS-based accelerometer and contact force sensors so it can detect when the user is actually holding vibrating tools. This solution allows automatic calculation of real daily exposure value for the period when the hand was in contact with the vibrating tool. Very important feature of the SV 107 is its robustness. The MEMS technology means the SV 107 is extremely robust, shock resistant, uses very low power and is free of the DC-shift effect that adversely affects systems based on piezoelectric accelerometers. The SV 103 is powered using rechargeable batteries charged through the USB interface which also enables easy interconnection between the instrument and a PC. The measurement data is safely stored in the large 8 GB memory. The instrument works with “Supervisor” software that offers dedicated calculator of A(8) daily exposure value and reporting templates.
Technical Specifications

**Vibration meter**

- Meter Mode: ahw (RMS), ahv (VECTOR), Max, Peak, Peak-Peak
- Filters: W, (ISO 5349) and corresponding Band Limiting filter
- RMS Detector: Digital true RMS detector with Peak detection, resolution 0.1 dB
- Measurement Range: 0.2 ms² RMS + 2000 ms² PEAK
- Frequency Range: 1 Hz ÷ 2000 Hz
- Data Logger: Time-history data including meter mode results and spectra
- Time-Domain Recording: Simultaneous 3-channel time-domain signal recording (optional)
- Analyser: 1/1 octave real-time analysis meeting Class 1: IEC 61260 (optional)
- Accelerometer: detachable SV 107 tri-axial accelerometer with hand straps in accordance to ISO 5349

**General Information**

- Display: colour OLED 128 x 64 pixels
- Memory: 8 GB non-removable
- Sampling rate: 6 kHz
- Interfaces: USB 2.0 client
- Keyboard: 4 push buttons
- Power Supply: Ni-MH rechargeable cells operation time > 24 hours²
- USB interface: 500 mA HUB
- Environmental Conditions: Temperature: from -10 °C to 50 °C
- Humidity: up to 90 % RH, non-condensed
- Dimensions: 88 x 49.5 x 19.2 mm (instrument without accelerometer, cable and mounting adapter)
- Weight: 150-160 grams with SV 107 accelerometer and one of vibration contact adapters

¹Function operates together with vibration level meter
²dependent on instrument configuration

The policy of our company is to continually innovate and develop our products. Therefore, we reserve the right to change the specifications without prior notice.
The SV 106 is a six-channel human vibration meter fully meeting requirements of ISO 8041:2005 standard. Thanks to six channels, the SV 106 enables simultaneous measurements with two tri-axial accelerometers. For hand-arm vibration measurements in accordance with ISO 5349-1 & 2 the SV 106 uses SV 150 or SV 105A accelerometers. For ISO 2631-1 whole-body vibration measurements the SV 38V seat-pad accelerometer is used.

The RMS, Peak, Peak-Peak, VDV, MTVV or vibration exposure results such as A(8) are available with this instrument. In addition to vibration exposure results, the SV 106 can perform real-time 1/1 or 1/3 octave analysis. The results are stored to built-in microSD card and can be easily downloaded to PC using USB interface.

The time-domain signal recording function enables raw data recording for the post-processing purposes such as dose calculation in accordance with ISO 2631-5.

### Features

- Human Vibration measurements meeting ISO 8041:2005, ISO 2631-1, 2 & 5 (including VDV and MTVV) and ISO 5349-1 & 2
- Six channels for acceleration and two channels for static force measurements
- Hand-Arm measurements:
  - SV 105A integrated tri-axial accelerometer including hand straps
  - SV 105AF integrated tri-axial accelerometer with force sensors including hand straps
  - SV 150 tri-axial accelerometer with adapter for direct attaching to hand-held power tools
- Whole-Body measurements:
  - Low power seat accelerometer SV 38V
- A(8) daily exposure automatic calculation
- Each acceleration channel with two profiles
- 1/1 or 1/3 octave real-time analysis (optional)
- Time-domain signal recording (optional)

- **Standards**
  - ISO 8041:2005;
  - ISO 2631-1:1997;
  - ISO 2631-2:2003;
  - ISO 2631-5:2004;
  - ISO 5349-1:2001;
  - ISO 5349-2:2001

- **Meter Mode**
  - $ahw$ (RMS HAND-ARM), $ahv$ (VECTOR HAND-ARM), $aw$ (RMS WHOLE-BODY), $awmax$ (RMS MAX WHOLE-BODY), $VDV$, Max$VDV$, $awv$ (VECTOR WHOLE-BODY), $A(B)$ Daily Exposure, ELV Time (TIME LEFT TO LIMIT), EAV Time (TIME LEFT TO ACTION), MTVV, Max, Peak, Peak-Peak,

- **Filters in Profile (1)**
  - $Wd$, $Wk$, $Wm$, $Wb$, $Wc$, $Wj$, $Wg$, $Wf$ (ISO 2631), $Wh$ (ISO 5349)

- **Filters in Profile (2)**
  - HP, KB, Vel3 (for PPV measurement) and Band Limiting according to ISO 8041

- **RMS & RMQ Detectors**
  - Digital true RMS & RMQ detectors with Peak detection, resolution $0.1 \text{ dB}$

- **Measurement Range**
  - Transducer dependent:
    - $0.01 \text{ ms}^{-2}$ RMS $\div 50 \text{ ms}^{-2}$ Peak (with SV 38V and $Wd$ filter)
    - $0.1 \text{ ms}^{-2}$ RMS $\div 2000 \text{ ms}^{-2}$ Peak (with SV 105A and $Wm$ filter)

- **Frequency Range**
  - $0.1 \text{ Hz} \div 2 \text{ kHz}$ (transducer dependent)

- **Data Logger**
  - Time-history data including meter mode results and spectra

- **Time-Domain Recording**
  - Simultaneous x, y, z time-domain signal recording, sampling frequency $6 \text{ kHz}$ (optional)

- **Analyser**
  - $1/1$ octave real-time analysis with centre frequencies from $0.5 \text{ Hz}$ to $2000 \text{ Hz}$ (optional)
  - $1/3$ octave real-time analysis with centre frequencies from $0.4 \text{ Hz}$ to $2500 \text{ Hz}$ (optional)

- **Accelerometer (optional)**
  - SV 38V tri-axial accelerometer for Whole-Body measurements
  - SV 105A integrated tri-axial accelerometer including hand straps
  - SV 105AF integrated tri-axial accelerometer with force sensors including hand straps
  - SV 150 tri-axial accelerometer with adapter for direct attaching to hand-held power tools
  - SV 151 tri-axial accelerometer for SEAT transmissibility measurements
  - SV 84 tri-axial IEPE accelerometer for ground / building vibration measurements

**General Information**

- **Input**
  - $2 \times$ LEMO 5-pin: six channels Direct or IEPE type and 2 channels for force transducers

- **Dynamic Range**
  - $90 \text{ dB}$

- **Force Range**
  - $0.2 \text{ N} \div 200 \text{ N}$ (dedicated channels for force transducers)

- **Sampling Rate**
  - $6 \text{ kHz}$

- **Memory**
  - Internal 16 MB non-volatile memory

- **Display**
  - 4 GB Micro SD card included (micro SD flash card slot supports cards up to 16 GB)

- **Interfaces**
  - USB 1.1 Client, Extended I/O - AC output (1 V Peak) or Digital Input/Output (Trigger - Pulse)

- **Power Supply**
  - Four AA batteries (alkaline) operation time $>12 \text{ h}$ ($6.0 \text{ V} / 1.6 \text{ Ah}$)$^2$
  - Four AA rechargeable batteries operation time $>16 \text{ h}$ ($4.8 \text{ V} / 2.6 \text{ Ah}$)$^2$
  - USB interface 500 mA HUB

- **Environmental Conditions**
  - Temperature: from -10 °C to 50 °C
  - Humidity: up to 90 % RH, non-condensed

- **Dimensions**
  - $140 \times 83 \times 33 \text{ mm}$ (without accelerometer)

- **Weight**
  - Approx. 390 grams including batteries (without accelerometer)

$^1$function operates together with vibration level meter
$^2$with one SV 38V tri-axial accelerometer in meter mode

The policy of our company is to continually innovate and develop our products. Therefore, we reserve the right to change the specifications without prior notice.
Hand-Arm Vibration Accelerometers

The SV 105A, SV 105AF and SV 150 are accelerometers for hand-arm vibration measurements with the SV 106 human vibration analyser. The accelerometers have a built-in memory (TEDS) containing information about the sensitivity that is automatically transferred to the SV 106 instrument.

The SV 150 is designed to be mounted on the tool being measured whilst the SV 105A and SV 105AF should be worn directly on the operator's hand. The SV 105AF also features a force sensors to detect the contact and to exclude periods of time when the tool is not in use. All three accelerometers have high shock resistance, no DC-shift effect and consume much less energy than IEPE / ICP sensors.

Whole-body Vibration Accelerometers

The SV 38V and SV 151 are accelerometers for whole-body vibration measurements with the SV 106 human vibration analyser. The accelerometers have a built-in memory (TEDS) containing information about the sensitivity that is automatically transferred to the SV 106 instrument.

In accordance with ISO 2631-1 seat accelerometers such as SV 38V are placed on the operator’s seat either on the seat-rest. For the SEAT transmissibility measurements the small size SV 151 is placed on the vehicle floor.

Supervisor Software

Supervisor is a software package for health and safety specialists. The package supports all Svantek instruments for the health and safety market. The Supervisor is designed to meet the needs of different users. In the case of simple applications that only require the analysis of the main results such as LAeq, LAFmax and Lcpeak, the program offers quick previews and reporting without the necessity of opening data files. More advanced applications are handled within sessions where the user can choose the type of analysis to be performed. Those who draw up noise or vibration reports on a daily basis will appreciate the report templates, which once created can be applied to different sets of measurement files. Each instrument that is connected to Supervisor is remembered together with information such as the uploaded settings, the firmware version, as well as the calibration validity date and instrument clock time. When data is downloaded, they are automatically categorised by measurement time and assigned to the instrument’s serial number.

Key features

- Easy to use, intuitive interface
- Easy measurement database management and browsing
- Convenient and fast report generation with templates
- Powerful tools for data analysis
- Easy installation including sample measurement files

Main applications

- Noise dosimetry
  - Data presentation with reference to limits
  - ISO 9612 noise exposure calculations
  - ISO 4869-2 hearing protection selection
  - What-if analysis
- Vibration exposure calculation in accordance with:
  - ISO 5349-2 for hand-arm vibration
  - ISO 2631-1 for whole-body vibration
- Sound level measurements
  - Time history recalculation with the possibility to remove the disturbances
  - 1/1 and 1/3 octave band sound analysis
Hand-Arm Vibration Exposure Calculation in accordance with ISO 5349-2

ISO 5349-2 gives practical guidelines in accordance with ISO 5349-1 of how to take hand transmitted vibration measurements at the workplace. These kinds of measurements are possible with the SV 106 human vibration analyser or SV 103 hand-arm vibration dosimeter. The data downloaded into the Supervisor database are assigned either to a particular user or to a task while all calculations are performed automatically. The measurements are recorded in m/s² and are directly comparable to the limits laid down by European Directive 2002/44/EC. It is also possible to convert these units into Points, which are widely used within the health & safety sector. All the information displayed within the panel window can be printed in the report.

Whole-Body Vibration Exposure Calculation in accordance with ISO 2631-1

The ISO 2631-1 standard defines the general methodology to assess whole-body vibration exposure. These measurements can be performed with the SV 106 human vibration analyser or the SV 100A whole-body vibration dosimeter. The measurements downloaded into the Supervisor database are assigned either to a particular user or to a task while all calculations are performed automatically. The measurements are recorded in m/s² and are directly comparable to the limits laid down by European Directive 2002/44/EC. It is also possible to convert these units into Points, which are widely used within the health & safety sector. By clicking on Mode, you can switch to calculations based on VDV which is often necessary when the vibration is characterized as impulsive.
The Supervisor software gives tools to simulate hypothetical situations in which the noise differs from that which was measured. When selecting a data block it is possible to shift the data up or down for any given dB value. It is also possible to simulate a situation where noise is equal to a given dB level or completely removed from time history. The altered data is recalculated automatically and both the original and recalculated results are shown so as to answer the question “What if”.

Supervisor creates reports in a very fast and easy way. The user selects a file and opens it by double click. The measurements are automatically grouped into context panels which can be opened and closed with a single click. The panels can be arranged with the drag & drop. Then you only need to click on the MS Word™ icon to print a report. The report layout can be saved at any time as a template and used for other files.
Supervisor Applications

Noise exposure recalculations in accordance with ISO 9612

The Supervisor software provides complete tool for determination of occupational noise exposure from noise level measurements. The Supervisor provides automatic calculation of all required measurement results and uncertainties in accordance to three measurement strategies described in ISO 9612: task-based, job-based and full-day.

Hearing protection selection in accordance with ISO 4869-2

Workers should wear hearing protectors if the noise or sound level at the workplace exceeds 85 decibels. The selection of hearing protectors depends on a noise level in the working environment. Therefore the selection of suitable hearing protector should be based on noise measurement. Each hearing protector has attenuation characteristics expressed in units of three methods:

- **SNR** Single Number Rating,
- **HML** High, Medium and Low frequency method, using A-weighted and C-weighted sound measurements in the calculation,
- **OCTAVES** the most accurate method requiring measurement in 1/1 octave bands.

The Supervisor supports all three methods allowing users to build up the hearing protectors data base. The calculation is done automatically with selection of data files containing noise results required by selected method.
An acoustic calibrator is a device which produces an acoustic pressure of defined level and frequency. In other words, an acoustic calibrator provides a template of acoustic pressure. By using such a reference we can check the accuracy of the measurements taken by the sound level meter and adjust them if a drift error in the sensitivity is detected. For this reason the norms and standards require the measurement channel to be calibrated before and also after each measurement session to verify the results.

Svantek calibrators are based on the reference microphone and microprocessor controlled signal source including digital static pressure and temperature compensation. Due to the feedback regulation control loop our calibrators do not require any adjustments by the user and operate over a wide range of ambient temperature and humidity levels.

The accuracy of acoustic calibrator should match the class of the sound level meter. A Class 1 or Class 2 calibrator should be used, depending on the class of instrument.

### Features

- SV 30A & SV 33 class 1 sound calibrators in accordance with IEC 60942:2003
- SV 34 class 2 sound calibrator in accordance with IEC 60942:2003
- Frequency 1 kHz
- 94 dB or 114 dB levels (SV 30A)
- 114 dB level (SV 33, SV 34)
- Built-in 1/2” reference microphone (SV 30A)
- Built-in 1/2” MEMS reference microphone (SV 33, SV 34)
- Microphone presence detection (SV 30A)
- Built-in temperature and static pressure compensation
- Automatic power off
- Dimensions 65 x 65 x 70 mm
- Robust housing
### Technical Specifications

**SV 30A & SV 33 class 1 sound calibrators** in accordance with IEC 60942:2003

- **Frequency** 1 kHz
- **94 dB or 114 dB levels (SV 30A)**
- **114 dB level (SV 33, SV 34)**
- **Built-in 1/2” reference microphone (SV 30A)**
- **Built-in 1/2” MEMS reference microphone (SV 33, SV 34)**
- **Microphone presence detection (SV 30A)**
- **Built-in temperature and static pressure compensation**
- **Automatic power off**
- **Dimensions 65 x 65 x 70 mm**
- **Robust housing**

**SV 34 class 2 sound calibrator** in accordance with IEC 60942:2003

- **Frequency** 1 kHz
- **114 dB level**
- **Built-in 1/2” reference microphone**
- **Microphone presence detection**
- **Built-in temperature and static pressure compensation**
- **Automatic power off**
- **Dimensions 65 x 65 x 70 mm**
- **Robust housing**

Contact Us: +44 (0) 161 871 7450  info@instruments4engineers.com  Visit Us: www.instruments4engineers.com
The SV 111 vibration calibrator is designed for in-situ checks in accordance with the ISO 8041 standard. The device is intended for operation in the field prior to and following a measurement or series of measurements to check that an instrument is working correctly. The calibrator is based on a built-in tri-axial reference accelerometer and computer-controlled shaker. In accordance with ISO 8041 requirements the reference accelerometer will measure cross-axes / transverse vibrations to detect any interference to the calibration signal. Three LEDs will light up on the calibrator panel whenever a fault caused by transverse vibrations is detected. This unique feature ensures the stability of the calibration level & frequency independently of the object being tested.

The SV 111 is designed to calibrate a variety of vibration meters at different frequencies from 16 Hz up to 640 Hz. Depending on the frequency selected, the user may select the level of calibration from 1 m/s² to 10 m/s². The shaker can be loaded with up to 1 kilogram. Any improper object fixing is automatically detected and indicated by LEDs on the control panel giving information about the axis that needs correcting.

A set of adaptors is available for calibration checks on tri-axial sensors including a special adapter for Svantek whole-body sensors (seat-pads), which can be directly mounted onto the shaker. Other types of vibration transducers can be easily attached using a mounting stand, a mounting disc or adapter.

**Features**

- Self-contained portable vibration calibrator
- Low frequency calibration at 15.92 Hz with maximum payload of 1kg!
- Easy calibration of all types of vibration transducers for acceleration, velocity and displacement at 15.92 Hz; 79.6 Hz; 159.2 Hz and 636.6 Hz
- In-field accelerometer checks according to ISO 8041
- Built-in reference accelerometer
- Cross-axes / transverse vibration detection
- Complete seat-accelerometer calibration
- Automatic fault detection
- Display showing frequency, magnitude and errors
- Automatic power off with timer
- Robust design
- Rechargeable battery
- Ready and easy to use in the field

  - 10 (at 15.92 Hz)
  - 2; 4; 6; 8; 10; 12; 14; 16; 18; 20 (at 79.58 Hz)
  - 1; 2; 3; 4; 5; 6; 7; 8; 9; 10 (at 159.2 Hz)
  - 0.25 (at 636.6 Hz)

- Vibration Displacement (RMS in µm)
  - 4; 8; 12; 20; 24; 28; 32; 36; 40 (at 79.58 Hz)
  - 1; 2; 3; 4; 5; 6; 7; 8; 9; 10 (at 159.2 Hz)
  - 0.0625 (at 636.6 Hz)

- Amplitude Error: Less than ± 3%
- Frequency Error: Less than ± 0.05%
- Transverse Vibration: Less than 10% of the main direction
- Harmonic Distortion: < 5% (at 15.92 Hz)
  - < 3% (at 79.58 Hz)
  - < 3% (at 159.2 Hz)
  - < 3% (at 636.6 Hz)

General Information

- Maximum Weight of Calibrated Object: 1000 grams (at 15.92 Hz)
  - 300 grams (at 79.58 Hz)
  - 200 grams (at 159.2 Hz)
  - 200 grams (at 636.6 Hz)

- Sensor Mounting: Thread M5 x 12 mm

Working Conditions

- Temperature Range: -10 °C ÷ 50 °C
- Humidity Range: 25% ÷ 85%

Power Supply

- Battery Type: Rechargeable 6 V/12 Ah
- Continuous Operating Time: Up to 20 hours
- Automatic Switch Off: From 5 to 60 minutes adjustable
- Charging Time: Less than 10 hours
- Power Supply for Charger: 15 W; 8÷24 V

Overall Weight and Dimensions

- Weight: 8.2 kg (incl. battery)
- Dimensions: 395 x 270 x 194 mm

Optional Adapters

- SA 111: seat accelerometer adapter for SV 38, SV 38V, SV 100 (included)
- SA 105A: adapter for SV 105A (option)
- SA 155: adapter for SV150 and SV151 (option)
- SA 38: adapter for SV 101 (option)
- SA 40: adapter for SV 207A, Dytran 3233A, SV 39A, Dytran 3143M1 (option)
- SA 44: adapter for SV 50, Dytran 3023M2 (option)
- SA 154: adapter for SV 84 (option)

Note: accelerometers shown on photos are not the part of SV111 kit!
Accredited calibration services

- Sound level meters to IEC 61672
- Acoustic calibrators to IEC 60942
- Band-pass filters to IEC 61260
- Noise dosimeters (noise exposure meters) to IEC 61252
- Vibration level meters
- Human vibration level meters to ISO 8041
- Vibration calibrators
- Vibration transducers to ISO 16063-21

We guarantee:

- Qualified & fully dedicated staff
- Highest level of competence
- State-of-the-art calibration equipment
- Patterns and equipment in accordance to International System of Units (SI)
- Integrity, impartiality and confidentiality
- Competitive pricing
- Short lead times
- Direct contact with repair service department
